Location

Lokanthali , Bhaktapur

+ SUMMARY

I am web developer with experiences of building responsive and visually appealing websites using NextJs Framework. I have knowledge on basic Javascript, TailwindCSS and NextJs. I also assist in designing, developing, and deploying machine learning models to solve real-world problems. I will work closely with senior data scientists and engineers to preprocess data, experiment with algorithms, and evaluate model performance. I have hands-on experience with Python, ML frameworks (such as TensorFlow or PyTorch), and data analysis tools.

+ EDUCATION

Bachelors in Information Technology

Bhaktapur Multiple Campus / Bhaktapur / January, 2022 - Present

I am currently pursuing Bachelors in Information Technology at Bhaktapur Multiple Campus, a campus under IOST of Tribhuvan University.

+ TRAINING/CERTIFICATION

freecodecamp full stack web development

Youtube / 2023

I Learned the fundamentals of web development including HTML, CSS, JavaScript, and building responsive layouts. I practiced modern front-end development workflows and version control using Git & GitHub, and gained experience creating interactive UI components and reusable layout structures.

ReactJs

ReactJs Documentation / 2023

I learned about the basics of **ReactJs** from <https://nextjs.org/learn/react-foundations> website and through hands-on projects which i did using frontend mentor website.

+ SKILLS

- Front End: ReactJS, NextJS, TailwindCSS, Figma
- TIME MANAGEMENT SKILLS
- Wordpress Website Designing
- AI/ML Related Skills: Supervised & Unsupervised Learning, Neural Networks, Model Optimization, Expla
- NymPy. Pandas, TensorFlow, Sciket-Learn, Matplotlib
- Driving (Two Wheeler's) . I own a two Wheeler.
- dsa
- Soft Skills Analytical thinking Team collaboration Strong communication Time management Adaptability

+ LANGUAGE

- Nepali
- English
- Hindi

Data Science and ML with Python

Broadway Infosys / 2025

I learned about basic and intermediate **Python Programming**. I learned various libraries and models provided as in Python environment to have better understanding of training and fitting the various machine learning model for both supervised and unsupervised learning. I gathered idea on how models work and are deployed online using **Streamlit** and backend functions with **FastAPI**.

Kaggle Learn

Kaggle Website / 2025

I worked with datasets in real Kaggle environments using **NumPy, Pandas, Matplotlib, and scikit-learn**. I learned how to train and evaluate models for both supervised and unsupervised learning. I practiced model interpretation, visualization, and improvement techniques. I also explored deployment of ML models using **Streamlit** and backend services like **FastAPI**.

Full Stack Web Development

The Odin Project / 2025

I followed The Odin Project's open-source curriculum to learn web development by building real, hands-on projects from scratch. I improved my understanding of **HTML, CSS, JavaScript, Git** workflows, and responsive UI design. The learning approach pushed me to debug, research, and solve problems independently, which strengthened my problem-solving mindset. I also gained practical experience in using **React, working with APIs**, and structuring applications in a way that is clean and maintainable. This training helped me become more confident in building full-stack applications and collaborating through **GitHub**.

+ PORTFOLIO

BIT Result Checker Application

BIT Checker is a simple yet powerful Streamlit-based web application that allows students to quickly and conveniently check their academic results using either their Roll Number or BIT Code.

<https://bitresult079.streamlit.app/>

Hospital Management System

I created a simple hospital management system with dashboard and sections where user can add patients and their desired appointments time using HTML, CSS and JS only. I am thinking of further leveling up my project using framework like NextJs.

<https://hospital-management-system-theta-jade.vercel.app/>

School Management System

I created a static webpage for school management system using HTML, CSS and JS only where students, teachers and classes records can be saved by the users.

<https://school-management-system-ten-pi.vercel.app/>

Phising Link and Spam Message Detector

I created a classification model for determining whether a given line of message is phishing link and spam or legitimate using the dataset that I gathered over from the Internet.

<https://github.com/bibash21-creator/Phishbuster>

Insurance Charge Calculator Application

Insurance Charge Calculator is a data-driven project designed to analyze and predict insurance charges using machine learning techniques. The project explores how various personal and demographic factors influence insurance costs and builds a predictive model to estimate charges effectively.

https://github.com/bibash21-creator/Insurance_Charges.git

Exploratory Data Analysis

This project focused on examining and understanding loan data. The goal of this project is to explore data patterns, perform hypothesis testing, and visualize meaningful insights that can help in understanding borrower behavior and loan characteristics.

<https://github.com/bibash21-creator/EDA.git>

Personal Portfolio

I have developed my personal portfolio using the latest version of Next.js, leveraging modern React features and optimized performance practices.
